Not illustrated. 1905 Excerpt: .Aug. 26-Nov. 9 a mean period of about 7h 59m is indicated. I hope, later on, to determine the period with some accuracy from a considerable number of observations. Only one observation of the phase  $w = -$ , with  $v$  increasing, has as yet been secured. It was recorded on Nov. 9 at 21h 50m Eastern Standard Time--3h 15m later than the corresponding phase with  $v$  decreasing. The time-interval between these phases is evidently variable. It was about five hours on Sept. 12-13 and 13-14, according to the records of those dates. I should add that the mean brightness of  $v$  is closely equal to that of  $a$ . My first observations of 32 Cassiopeiae and B. D. + 63 149 were made on Aug. 20, the variation in relative brightness was detected a few days later. Up to date I have secured 187 complete observations of...
