By Bryn Mawr College

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: .for the normal eye. One of the writers<sup>1</sup> mentioned several years ago in a partial report of a somewhat extensive investigation of the color sensitivity of the peripheral retina that small areas could be found in the periphery of the normal retina showing characteristics for the colors red, green, yellow and blue similar to the Schumann case for red and green. That is, areas may be found which are totally blind or deficient to one of these colors so far as the positive response is concerned, but which seem not to be correspondingly deficient in the after-image and complementary or cancelling reactions. In fact, so far as can be told, the after-image and complementary reactions are no different in these areas from those in the immediately adjacent normal portions of the retina. We found it infeasible to test for a contrast reaction in these comparatively small...

### **Reviews**

*This written publication is wonderful. It really is loaded with knowledge and wisdom You will not really feel monotony at at any time of your time (that's what catalogues are for relating to if you ask me).*

-- **Desmond Becker**

*Absolutely essential go through publication. I am quite late in start reading this one, but better then never. You will not feel monotony at at any time of the time (that's what catalogues are for regarding if you ask me).*

-- **Ambrose Thompson II**
